

A3W CONCEALMENT G SHOCK Supplement

The Geonautics A3w concealment contains an A3 audio recorder in a watch, for the purpose of recording conversations during meetings etc. with its internal microphone.

GETTING STARTED

Pry up (using a flat screwdriver) under the dimple on the back plate of the unit. The watch back plate can now be moved away from the watch body to expose the A3w device.

The device is powered by three, 389 Silver Oxide batteries. These batteries will enable the device to record for ~4hrs.

Warning:
Do not damage or try to remove the tube over the microphone.
Doing so will ruin the acoustic performance.

Insert 3 batteries into the battery holders provided on the A3w device. The positive (+ve) terminal is up away from the device, while the negative (-ve) terminal is facing toward the board. Once the batteries have been inserted, the device is in "sleep" mode waiting for the ON sequence to begin recording.

MAKING A RECORDING

Press and hold the button, accessible through the hole provided in the back, for 5 seconds. The LED within the device will illuminate, which is visible through the hole next to the button, indicating that recording has started. Whilst the unit is recording, the LED will flash when the button is pressed. This allows the user to see if the device is recording at that time.

ENDING A RECORDING

Press and hold the button for 15 seconds. The light will turn off and this will signify that the device has stopped recording. Whilst the unit is OFF, the LED will not illuminate when the button is pressed. This allows the user to know that the device is **not** recording at that time.

CONNECTING THE A3W TO A COMPUTER

Plug the Geonautics USB Downloader into the USB port of your Computer. Plug the other end of the Geonautics Dongle into the A3w adapter. The A3w adapter is then plugged into the A3w, making sure the red alignment marks line up as shown.

A3W KIT

| Dingo Kit | Description |
|-------------|---|
| TAG-A3w Kit | TAG-A3w Digital recorder USB download cable (1.2m/ 4ft cable) A3w Adapter cable 3 x 389 batteries Whisper2 & Authenticate Software Bilby/Dingo User Guide Presentation Case |

Important Notes:

- The A3w contains a rechargeable Real Time Clock(RTC) Battery, this Battery is a rechargeable Lithium Battery giving 3 Months shelf life (i.e. 3 Months of accurate time keeping without being powered).
- It is recommended that the device be initially powered for 5 hours, as the battery will only be partially charged when shipped, further when connected to the computer via a USB Downloader or power is applied when deployed, a small amount of current is used to trickle charge the RTC Battery, thus maintaining the battery voltage.
- The A3w audio recorder does not contain the facility to conduct timer mode recordings.
- Please Refer to the watch instructions for setting the time
